

As my role has been primarily advisory throughout this project, much of my work has been discussing, guiding, and helping the other members of the project in regards to using Git, Jupyter, TeX, and Qiskit. As well as my visible work in the commits given in the links on Submittity, I also want to highlight the following work I have done:

- Advised Chris on <https://github.com/YangleLiu/quantum-education-modules/pull/96>
- Advised Carolyn throughout the work on Shor's algorithm.
- Advised Matthew throughout the work on the Deutsch-Joyza algorithm.
- Guided Carolyn and Matthew on good pull request, commit, merge, and rebase practices.
- Tested the functionality of most of the merged PRs.
- Used my experience as an educator to look at the modules from a student's perspective and see what could be more clear.
- Pointing Chris, Carolyn, and Matthew to good resources to further develop their modules / better explain advanced concepts.
